

<Bert Gryson/>

Junior front-end developer with ambitions for full-stack development. In a past life I was a project lead in construction, which taught me a great deal about working in or as a team and in a company structure in general. As I chose a new direction in my career path, I studied graphic design and learned how to work with the Adobe tools. I followed this up with a course in full-stack development where I got bitten by the bug (pun intended). Afterwards I kept working on various coding projects and landed a temporary job in web development. As this comes to an end I am looking for a new opportunity to enrich my coding skills.
